

Use this slide deck for your team's final slide submission

Important things to remember:

- ❑ Use **this specific Google Slide Deck** for your team's final presentation
- ❑ This slide deck will be copied/inserted as-is into the master deck used during the final pitches for all teams
- ❑ Please have the **first and last slide** of your presentation have the information shown in the next two slide templates
- ❑ Please indicate, which Special challenge prizes you are pitching for in your presentation by keep the appropriate "✅ Sponsor" indicator. Please keep the ones your pitching for and delete the rest

Recommendations:

- ❑ Include a slide with your team members headshots as your last slide, so people can easily recognize you after
- ❑ All the rest of your slides can be added to remainder of this slide-deck. Use any format, style, colors or theme you would like. This is your presentation!
- ❑ If you have reference data slides, you can keep them hidden at the end of your main presentation and show them if needed during the Q&A. Your hidden slides will also be copied over to the master deck
- ❑ You can delete this instruction slide

Team 218 - Global-Therma

Circulatory deterioration contributes to neonatal mortality, long-term health complications, and increased healthcare costs. Infrared thermography-enabled NICU beds for early detection of circulatory deterioration

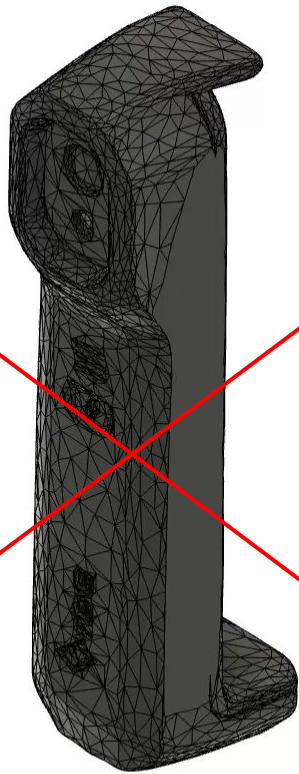

Team Introduction

This is a neonatal baby born with early onset sepsis. Current Detection methods were not enough to react on time.

Global Neonatal Deaths Pie Chart from Circulatory Failure in the design to look like the earth. Splits circulatory failure into specific groups based on particular type of circulatory failure like early onset septic shock

This devastating reality could be repaired with just one camera

Index Slide: Explanation of Global Deaths

We partner with existing vendors, utilize research backed ML methodologies, collaborate with existing hospital systems, our team has had a close connection with FLIR, exists validation for segmentation masks overlaid on thermal images of newborn babies to demonstrate early warning signs of circulatory failure, we integrate this into existing systems. We have received interest from the Northwell health system and we plan to use Intersystem's FIHR
